

SYED HASSAN FIDA

Full Stack Software Engineer | Laravel | MERN | AWS | AI RAG LLM Integrations

Lahore, Punjab, Pakistan (Open to Remote) | +92 310 251 9758 | hassans.official1@gmail.com

LinkedIn: linkedin.com/in/syed-hassan-fida | GitHub: github.com/Syed-Hassan-Fida | Portfolio: syed-hassan-fida.github.io/portfolio.github.io

PROFESSIONAL SUMMARY

Results-driven Full Stack Software Engineer with 5+ years building and shipping production ERP, CRM, SaaS, and eCommerce platforms using PHP Laravel, Node.js, Express, React.js, Next.js, MySQL, MongoDB, and AWS. Designs multi-tenant architectures, secure REST APIs, role-based access control (RBAC), background queues, and high-performance data layers with Redis caching and query optimization. Delivers production Retrieval-Augmented Generation (RAG) assistants and Large Language Model (LLM) integrations that ground AI answers in company data for support, search, and growth workflows. Combines cloud deployment (AWS EC2, S3, CloudFront, Docker, CI/CD, Nginx, Linux) with measurable impact, including an 80% reduction in production ERP database query time. Positioned for the next generation of product engineering: AI-augmented delivery, API-first backends, reliable cloud operations, and business systems that stay fast, secure, and maintainable.

CORE COMPETENCIES

Full Stack Development, Backend Engineering, Frontend Engineering, PHP Laravel, Livewire, Node.js, Express.js, React.js, Next.js, Redux, Vue.js, TypeScript, JavaScript, Python, MySQL, MongoDB, Redis, SQL Query Optimization, Database Indexing, REST API Design, GraphQL, WebSockets, Authentication, Authorization, JWT, OAuth, Multi-Tenant SaaS, RBAC, Microservices-Ready Architecture, Queue Workers, Caching Strategies, Performance Tuning, System Design, RAG, Retrieval-Augmented Generation, LLM Integration, Vector Embeddings, Semantic Search, AI Assistants, Prompt Grounding, AWS, EC2, S3, CloudFront, Google Cloud Platform (GCP), DigitalOcean, Docker, CI/CD, Nginx, Linux, Git, Agile Scrum, Unit Testing, Integration Testing, Code Review, Mentoring

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, SQL

Backend: Laravel, Livewire, Node.js, Express.js, REST APIs, GraphQL, WebSockets, Auth, JWT, OAuth, RBAC, Queues, Jobs, Event-Driven Workflows

Frontend: React.js, Next.js, Redux, Vue.js, Tailwind CSS, HTML5, CSS3, Responsive UI

AI and LLM: Retrieval-Augmented Generation (RAG), LLM Integrations, Embeddings, Vector Retrieval, Semantic Search, AI Assistants, AI Marketing Funnels, Grounded Knowledge Bases

Databases: MySQL, MongoDB, Redis, Schema Design, Indexing, Query Optimization, Caching, Aggregation Pipelines

Cloud and DevOps: AWS EC2, AWS S3, AWS CloudFront, Google Cloud Platform, DigitalOcean, Docker, CI/CD, Git, Linux, Nginx

Engineering Practices: System Design, API Versioning, Contract Testing, Unit Testing, Integration Testing, Performance Profiling, Observability Basics, Agile Scrum, Code Review, Mentoring

PROFESSIONAL EXPERIENCE

Software Engineer | 3Amigos

Lahore, Pakistan | May 2024 - Present

- Architected and delivered multi-tenant ERP and CRM backends on Laravel and Node.js, owning data models, service boundaries, API contracts, and production release readiness for order, inventory, and billing domains.
- Built and integrated production RAG-based AI assistants into the Solidariteit / SNP Laravel platform so member support answers are grounded in platform knowledge instead of generic LLM output.
- Reduced production ERP database query time by 80% through N+1 elimination, composite indexing, query rewriting, and Redis caching for hot read paths.
- Designed and shipped versioned REST APIs with authentication, authorization, and contract tests for reliable client integrations across web and mobile consumers.
- Containerized and deployed services with Docker to AWS EC2, Google Cloud Platform, and DigitalOcean, improving environment consistency from development through production.
- Partnered with product and engineering stakeholders to translate business workflows into secure, maintainable software that supports scale, auditability, and operational reliability.

Software Engineer | Optima Geeks

Lahore, Pakistan | May 2023 - April 2024

- Delivered full stack product features across MERN, Laravel, and Python, covering MySQL and MongoDB schema design, API implementation, and production React user interfaces.
- Improved database retrieval performance with targeted indexes, query rewrites, and MongoDB aggregations for high-traffic read and reporting paths.
- Hardened third-party API integrations using retries, idempotency keys, and failure-safe handling to reduce dropped transactions and inconsistent system state.
- Standardized Docker local environments and Git branching workflows, shortening engineer onboarding time and reducing environment-related delivery blockers.
- Collaborated in Agile sprints to ship tested increments, participate in code reviews, and keep feature delivery aligned with product priorities.

Backend Engineer (Laravel) | Virtual Underdogs

Lahore, Pakistan | January 2022 - April 2023

- Led CRM backend architecture end to end in Laravel, including relational data modeling, secure REST APIs, token-based authentication, and multi-tier RBAC for role-sensitive business operations.
- Tuned MySQL schemas and indexes to stabilize response times as CRM data volume and concurrent user activity increased.

- Mentored junior engineers on Laravel conventions, API design, and code review standards that reduced recurring production defects.
- Improved backend reliability by clarifying service boundaries, validation rules, and permission checks across CRM modules.

Associate Software Engineer | Flitkick Innovations FZE

Lahore, Pakistan | October 2020 - December 2021

- Owned end-to-end delivery of an enterprise ERP module using Laravel and React.js, from requirements clarification through schema design, API work, and UI integration.
- Designed MySQL schemas and application-level caching strategies that kept core ERP workflows responsive under growing operational load.
- Built maintainable feature modules with clear validation, authorization checks, and reusable backend patterns suited for long-lived business systems.
- Gained foundational production experience in Agile delivery, debugging, and cross-functional collaboration with product and QA stakeholders.

SELECTED PROJECTS

Solidariteit / SNP Portal | RAG Membership Platform

Technologies: Laravel, Livewire, MySQL, REST APIs, RAG, LLM Integration

- Built REST APIs for web and mobile clients and shipped a RAG assistant that answers member questions using grounded platform knowledge for higher trust and relevance.

CuddleClones.com | eCommerce and AI Growth Platform

Technologies: React.js, Tailwind CSS, Payments, RAG, AI Marketing Funnels

- Delivered custom-order commerce flows with payment integration and AI-assisted marketing funnels that personalize engagement and support conversion.

OnwardOps | Operations Backend Platform

Technologies: Laravel, Node.js, MySQL, AWS, RBAC

- Built backend systems from scratch with authentication, RBAC, workflow automation, and query latency improvements for operational reliability.

Jahavi.com | B2B Order Management

Technologies: Laravel, React.js, MySQL

- Implemented multi-role B2B order management, secure integrations, and checkout optimization for smoother buyer and seller workflows.

Redefine.church | Real-Time Media Platform

Technologies: Node.js, WebSockets, Docker, AWS

- Delivered real-time live-stream chat and media services with containerized deployment on AWS.

EDUCATION

Bachelor of Science in Computer Science | Bahria University | 2018 - 2022

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Databases, Computer Networks, Software Engineering, Object-Oriented Programming

ADDITIONAL INFORMATION

- Open to full-time and remote Software Engineer, Full Stack Engineer, Backend Engineer, and AI Integration Engineer roles.
- Strong fit for product teams building SaaS platforms, ERP/CRM systems, eCommerce, and AI-enabled customer or internal tools over the next five years.
- Comfortable owning features from architecture and implementation through testing, deployment, and production support.
